

## ABSTRACT

An improved handsfree apparatus of the present invention mainly comprises a plug-in part, a holder, wherein the plug-in part is a multi-bending structure to provide the holder an omnidirectional usage space, and the holder has a  
5 room to place the cell phone and is suitable for different specifications of cell phones, and an external microphone which has the characteristic that sound input/output are independent, and echo and interference of noise is avoided such that quality of communication is better and the structure of used  
handsfree apparatus has more diversifications.
